In the Matter of: RM-11346

I SUPPORT the petition made by Murray Green to change 47 CFR Part 97 Section 97.119 to require identification every thirty minutes.

The changes Green proposes would lessen the burden of repetitive identification, particularly during “roundtable” type operations, where more than 10 minutes may elapse before an individual station may have another opportunity to transmit.

In emergency and public service operations where a multitude of stations transmit brief messages, the amount of time spent identifying every ten minutes needlessly obstructs the communications channel.

Thus, the regulations in 47 CFR Part 97 Section 97.119(a) should be changed to require identification every **thirty** minutes of continuous operation
